What is School Voice Digital Signage?

School Voice is a state-of-the-art Digital Signage system, tailored specifically for deployment within schools and colleges. Digital Signage is the use of digitally powered signs (such as Plasma, LCD, CRT and digital projectors), to replace and enhance traditional communications media.

Where would I put Digital Signs?

Some of the following areas are considered suitable to have Digital Signs installed:

- Reception
- Canteen
- Library
- 6th Form Common Room
- Learning Resource Centre
- Staff Room
- Arterial Corridor(s)
- Community Centre (Learn Direct etc.)
- School Hall.

Why should I consider Digital Signage?

Digital Signage in education offers a very powerful, highly flexible and innovative communication method for campus environments. Schools, Colleges and Universities, along with their stakeholders, can all benefit from the real-time messaging capabilities and high-impact content of a professionally installed Digital Signage system.

Students are oriented towards televisions and other high-tech electronic media. That makes digital signs a natural mechanism for bringing up-to-date information to students and staff, in a way that will continuously attract their attention.

What if I have already installed a Plasma screen in Reception, running PowerPoint from a PC?

School Voice would significantly enhance your existing system. Your previous investment can be protected and the screen can be reused during a School Voice deployment.
